Rui Filipe Santos Carapinha   Artifical Intelligence – Project Proposal

Sports Match Predictor

- **Description**

  My project proposal is a Sports Match Predictor, the goal is to predict with some kind of accuracy the results of a game.

- **Objectives**

  In this project, I will try to create a program that will analyze past-data and some other factors (using Artificial Intelligence) to try to predict the result of a game.
  What it must do: Analyze correctly the data and give some output of the next games.
  What I hope it does: Gives an accurate result of the next games.

- **Hardware and Software**

  The software I will use is python.
